

# Update Notice

December 1989

078-600030-00

For Model Numbers:  
Q001AAQ, Q001AHU, P001AAQ, P001AHU.

Read this Update Notice before installing the DG/UX 4.20 software.

Before installing DG/UX 4.20, make sure the terminal you are using as your system console is set for 8-bit no parity transmission. Other settings may work on 4.10 systems, but the 8-bit character support added in revision 4.20 requires that the system console be set for 8-bit no parity transmission. If your console is not set correctly, characters may appear garbled on the screen.

To reset your terminal's bit/parity configuration, see your terminal's user documentation.
